

Do I like this?

So what can **I** do?

STEP 1: Stop Mixing all waste and throwing it **ALL** out in one plastic bag

STEP 2: Know your different kinds of waste

When I **mix** plastic with tomato peels -
I **cannot use** the plastic or the tomato

When they are separate - each of these things
can be **recycled** except for rejects

STEP 3: I will **store** Plastic, Paper, Glass and Metal Waste in separate boxes

Because then I **can sell** this clean and separated material to the recyclers.

This will ensure that it does not reach a dumpsite

STEP 4: Store all my **E-waste** in a box - the box will take some time to fill up - when full - I will go and deposit it at a **E-Waste recycler** (*All the large Indian cities have such companies*)

STEP 5: Store all my **Hazardous Waste** in a box and go and deposit it at a **Hospital or Medical Waste Pick up Service** (*All the large Indian cities have such companies*)

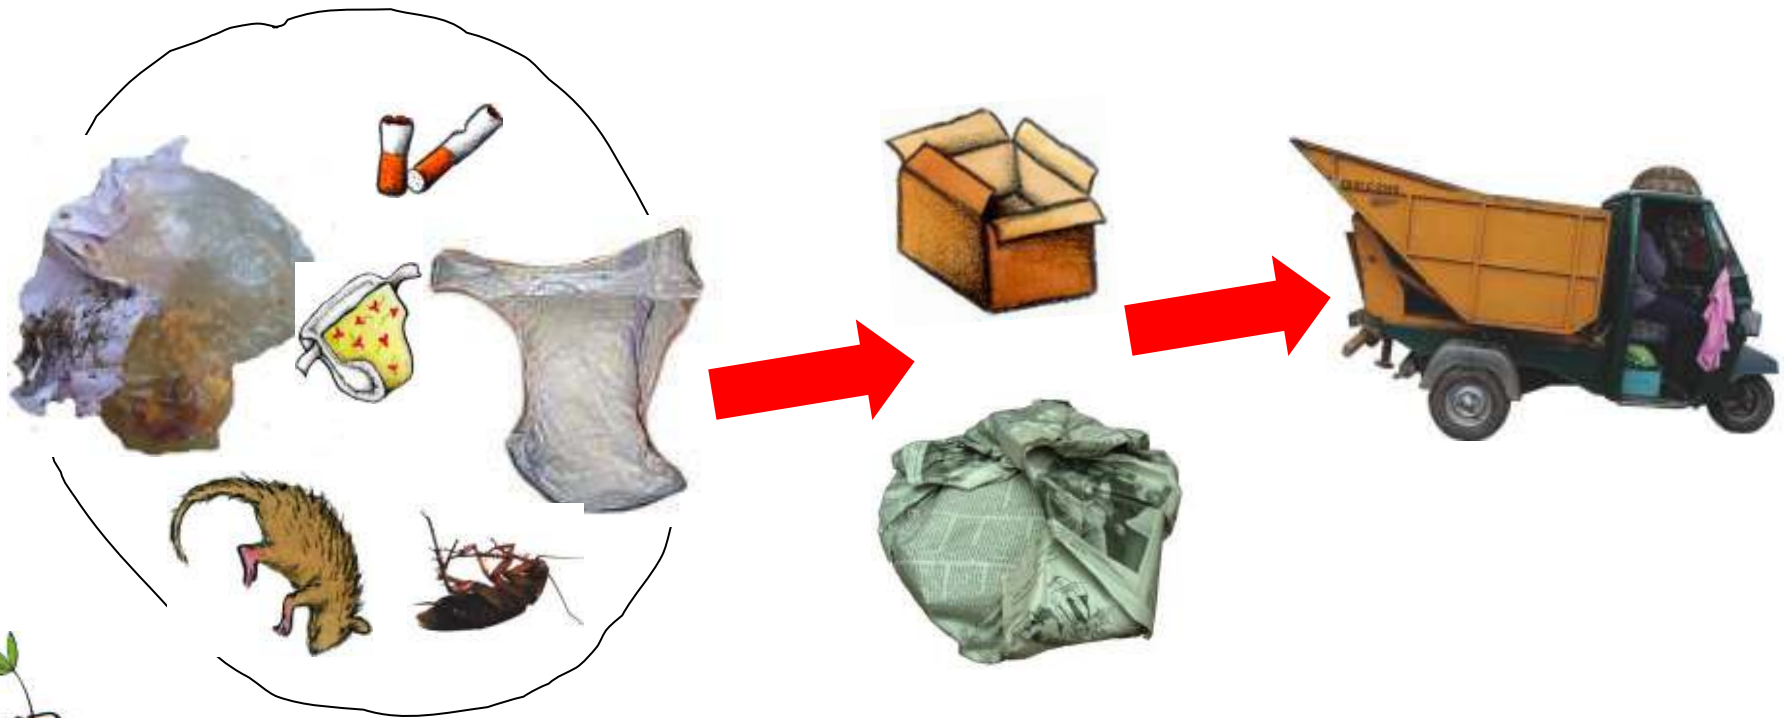

Cosmetics and Paints are highly toxic and need special treatment before they can be dumped

Because then I **can give** this separated material to the specific recyclers.

This will ensure that **it does not reach** a dumpsite and cause pollution

STEP 6: Throw all my **Reject Waste** in a box or paper bag for collection by the municipal pick up service
(All the large Indian cities have such facility)

Because then I **can save** money on the black plastic bags = 365 bags per year and on plastic bags lining my dustbins.

This will ensure that it I send **less plastic bags** to the dumpsite

STEP 7: Collect all my **Organic Wet waste** in a container in the kitchen for composting at home.

This can include waste food, bones, tea bags, tissue paper, mango seeds

Because then I can **convert it into compost** - which is nutrient rich top soil for the earth.

This will ensure **no methane** production at the dumpsite

Daily Dump provides many different composting options for homes, a block of flats, a office and schools

Summary

SEGREGATE

Segregate at individual home level - DAILY
Choose the appropriate container for the different kinds of waste
